Rethinking Scientific Computing in the Age of AI

Te-Sheng Lin

Department of Applied Mathematics,
National Yang Ming Chiao Tung University, Taiwan.

Abstract

Recent advances in artificial intelligence are opening new possibilities for scientific computing. In this talk, I will introduce AI-based methods for solving partial differential equations. I will also discuss the reliability of AI-generated results and share practical experiences using generative AI as a research assistant for programming and mathematical reasoning. Finally, I will highlight the exciting opportunities and challenges of integrating emerging AI tools into scientific research.
